Ft. Monmouth-Neutron Generator Final Closeout Report

John Czapor, Chief
Site Investigation & Compliance Branch

Paul Giardina
Radiation Representative

As a result of our meeting of February 10, 1986 with Ft. Monmouth discussing radiological decontamination of their sites, the attached final close-out survey report for the Sandy Hook Neutron Generator Facility has been submitted to us. Larainne Koehler of your staff attended that meeting with us and has been anticipating this report.

The study submitted by the U.S. Army Environmental Hygiene Agency (AEHA) should demonstrate that the facility has been adequately decontaminated and meets the Nuclear Regulatory Commission's criteria for unrestricted use. We are requesting your review of the survey report for adequacy by June 16, 1986.

If you have any questions feel free to contact Helen Shannon of my staff at x4706.

Your cooperation in this matter is appreciated.
